

# HUNT & SPECIES

Hunting is by horseback and foot in the Altai region after driving to a certain point in the hunting area. Gobi and Hangay argali hunts are conducted with the use of trucks and stalk on foot. Spot and stalk hunting is the preferred method of hunting as it allows us to judge the animals with spotting scopes before making the final stalk. There are 2 species of Ibex in Mongolia and population is very healthy in Mongolia and a very enjoyable hunt to combine with your Argali hunt.

Hunting season for Ibex is: July 1st – October 15th

## GOBI IBEX (Capra Sibirica Hagenbecki)

Gobi Ibex is the closest relative to Altai Ibex. Gobi Ibex inhabits Rocky Mountains in the southern part of the Altai range that stretches deep into the Gobi desert, known as the Gobi Altai range. Gobi Ibex are smaller than it's Altai relative due to scarce vegetation and limited water source in it's dry habitat. Gobi Ibex have a brown coat and light patch under its belly and between it's legs. A male Gobi Ibex is over 3 ft. (95-105cm) tall and weighs 200 lbs. (70-90kg).

Average trophy size: 34-37" in length; max 42"

## ALTAI IBEX (Capra Sibirica Sibirica )

Altai Ibex is the larger of two Ibex in Mongolia and is mostly found in steep cliffs and narrow canyons with loose rock strips. Ibex feed in the morning and evening and rest in shadow for much of the day. Major hunting areas are rocky cliffs in the drier part of the Altai range. Altai Ibex have a red brown coat with a light patch with the coat getting darker in older males. A male Ibex has a long hair beard. A male Altai Ibex stands at around 3-3.2ft (105 -110cm) tall and weighs 280lbs. (90-110kg).

Average trophy size: 37-45" in length; max 48"

In general, the number of Argali sheep is good in Mongolia and quality of trophy has increased compared to a decade ago, at the moment there are a few dozen Argali permits on average annually.

Hunting Dates for all Argali species: July 1- September 30

## GOBI ARGALI (Ovis ammon darwini)

Coming from the name the Gobi Argali resides at Gobi Desert region of Mongolia and China Average Gobi Argali size: 44-50" with 15-18" bases.

## HANGAY ARGALI (Ovis ammon ssp)

Average Hangay Argali size: 50"-54" with 17-20" bases. A Ram reaching 54" up to 57" are of exceptional size and can be found in occasions depending on the conditions of the hunt and the area hunted- please inquire for conditions and pre-scouting options.

## ALTAI ARGALI (Ovis ammon ammon)

The greatest and largest of all Argali species in the World. Body length is up to 6ft., shoulder height is 4 ft. and their weight is 400-450 lbs. on average. Altai Argali lives in the Altai Mountains of Mongolia, China and Russia. Also known as the rarest Argali in the World due to limited licenses BUT not limited population, on the opposite the population in the Altai Region has been highest in the recent years. Our company has very few licenses in a great hunting area, please inquire and make your reservations far in advance. Average trophy size: Altai Argali has the heaviest horns of all the sheep of the world exceeding 75 lbs.! 54-56" horn size can be achieved with 18"-21" bases can be found and extraordinary trophies reaching 58"-60"and over in special occasions may be found depending on the conditions and special planning and extensive pre-scouting.
